

Fortress as a Service: The Blueprint for Modern Data Center Access Control

Secure infrastructure, ensure compliance,
and maintain uninterrupted operations
with NUVEQ.

The Data Center is a Unique Ecosystem with Uncompromising Demands

Uninterrupted Operations

Uptime is paramount; security cannot impede operations. Any breach or failure carries catastrophic financial and reputational risk.

Complex Access Needs

Managing diverse user groups—from full-time staff and engineers to temporary contractors and auditors—each requiring different, often temporary, levels of access.

Rigorous Compliance Mandates

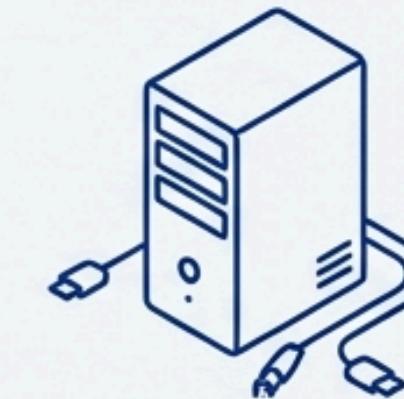

Stay audit-ready for ISO 27001, SOC 2, PCI DSS, and GDPR.

Traditional Access Control Creates Silos, Risk, and Inefficiency

Siloed Systems

Disparate systems for doors, racks, and perimeters that don't communicate.

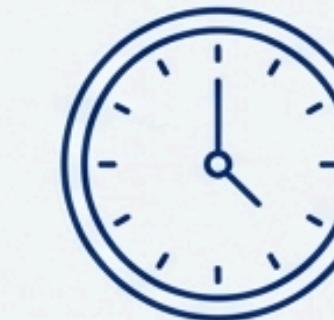

On-Premise Burden

Requires costly on-site servers, manual software updates, and dedicated maintenance.

Manual Compliance

Difficult to pull unified audit logs, leading to time-consuming and error-prone compliance reporting.

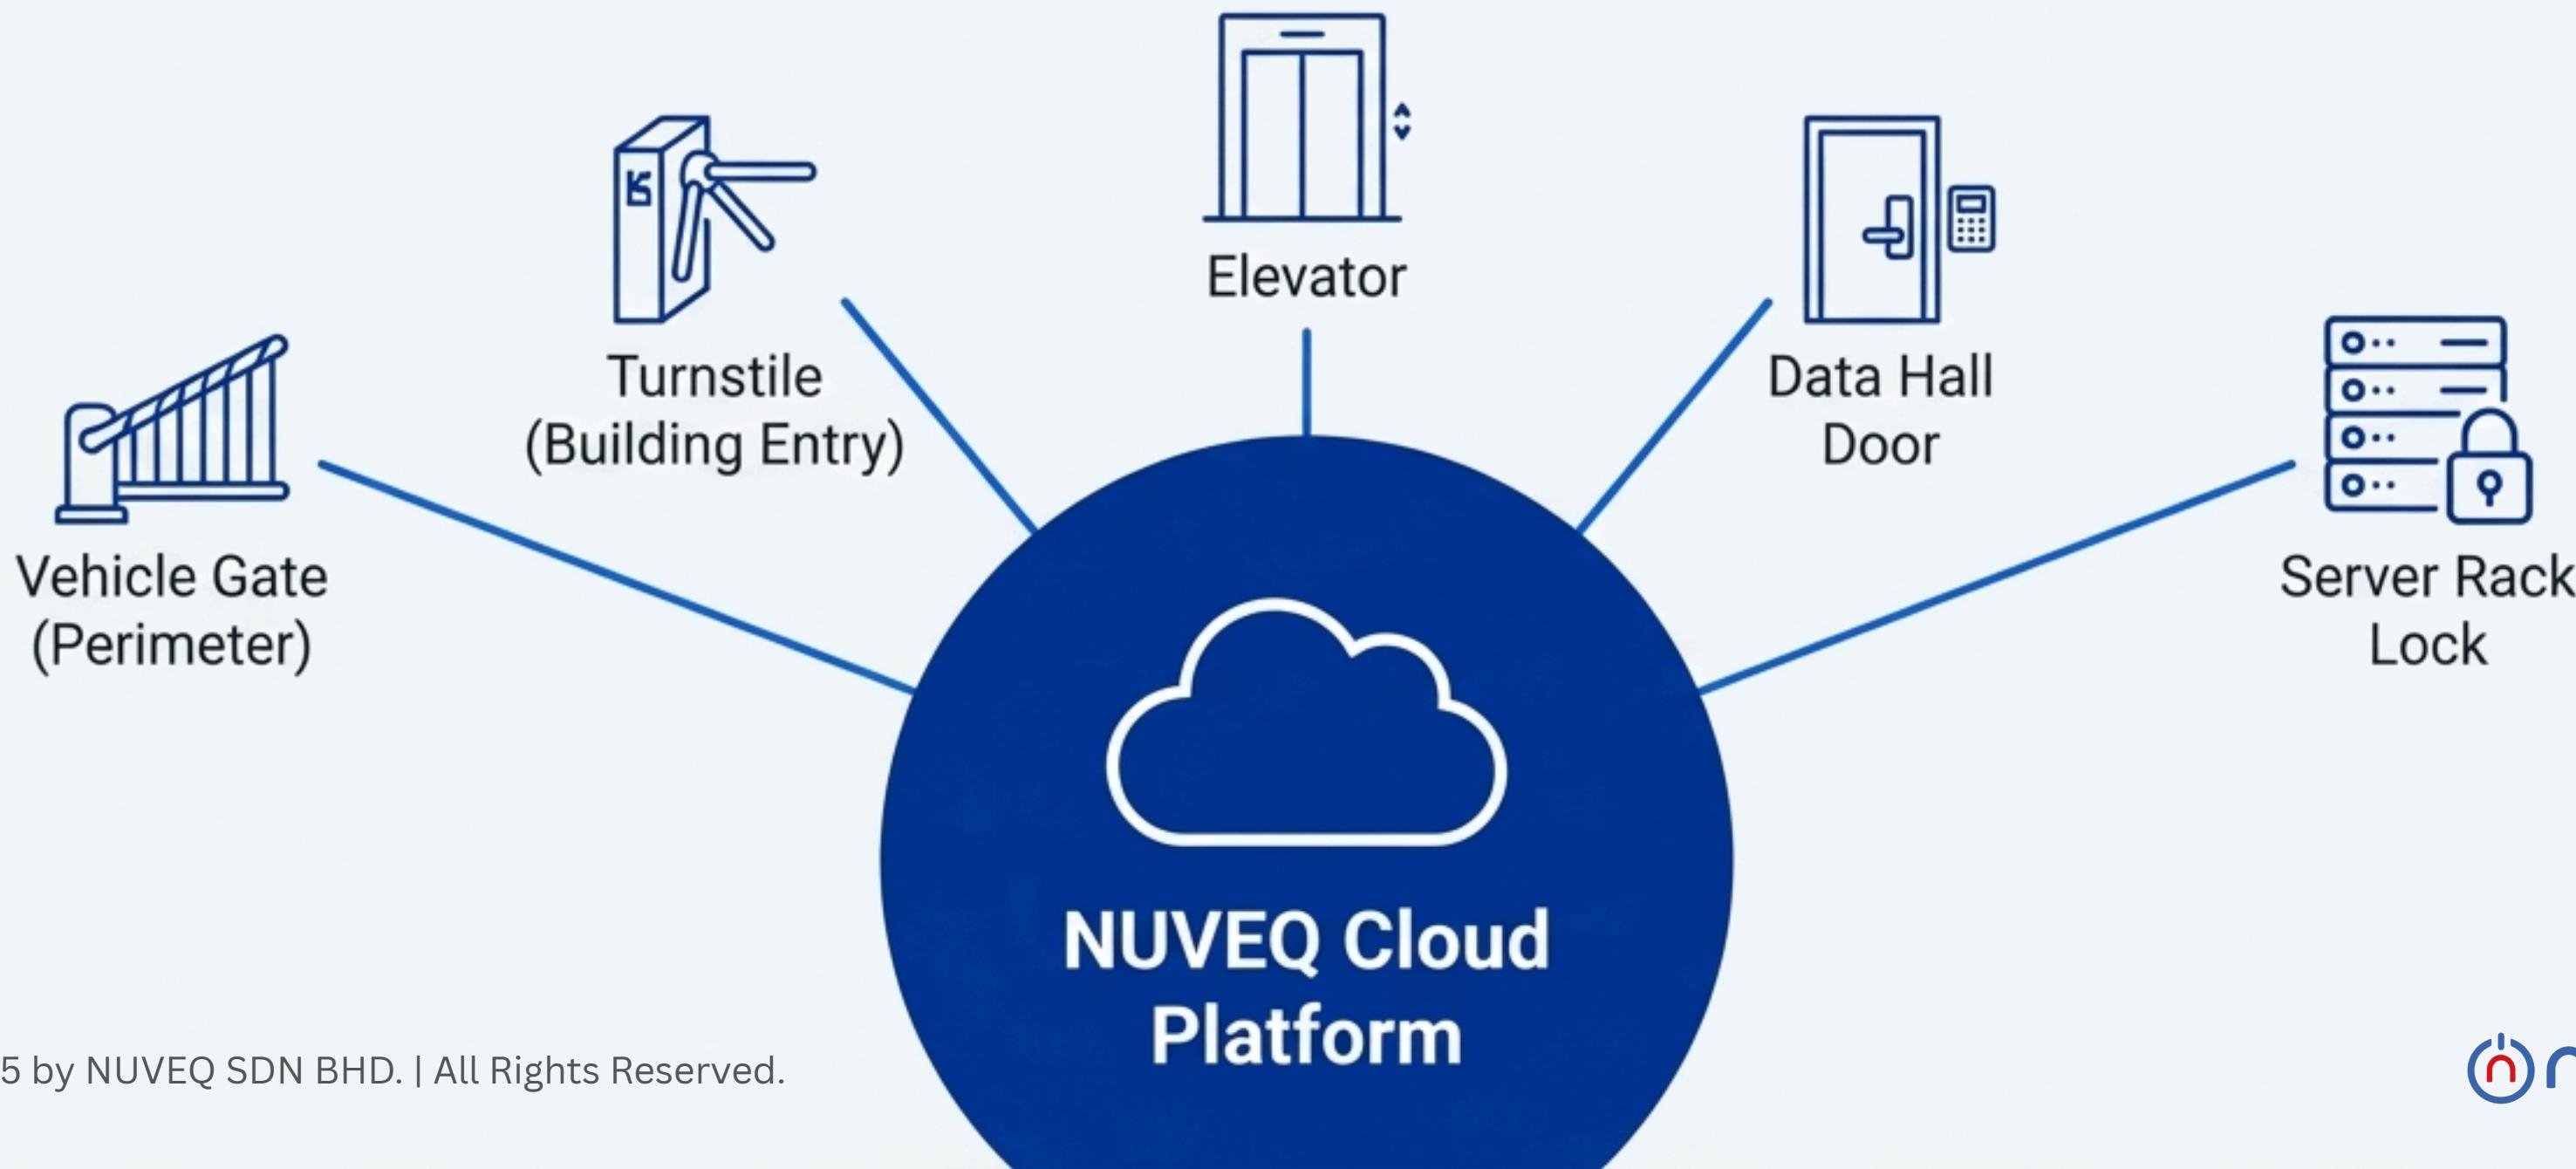

Inflexible & Slow

Slow to provision or revoke access, especially across multiple sites, creating security gaps.

NUVEQ Delivers a Unified Security Fabric, from Perimeter to Rack

Protect and manage access across your data halls, server rooms, and global facilities through one secure, cloud-based platform.

The Core: A Single Pane of Glass for Global Management

Multi-Site Visibility: Manage access across multiple data halls and sites in real time from a single dashboard.

Access Groups & Roles Management: Enforce granular, uniform security policies across all locations.

Real-Time Monitoring & Alerts: Instantly view entry logs and receive intrusion alerts to respond to threats faster.

Built on Google's ULTRA SECURE Cloud Platform.

Securing Every Layer of Your Mission-Critical Facility

4 Server Rack

3 Data Hall & Secure Rooms

2 Building Entry

1 Site Perimeter

IoT Server Rack Lock,
Dual Access Modes

AI Face Recognition Terminal,
Door Interlocking feature

Full-Height Turnstiles,
Swing Turnstiles

Access Barrier Gate,
IoT Vehicle Control

Engineered for a Zero Trust and High-Resilience Environment

Zero Trust Architecture

Enforces strict identity verification for every user and device—no implicit trust.

Time-Based & Temporary Access

Grant limited-time or scheduled access to users, perfect for contractors and guests, minimizing standing privileges.

Emergency Lockdown & Mustering

Instantly restrict access during security threats and account for personnel in an emergency.

Offline Capability

NUVEQ's offline capability guarantees access and maintains security logs even in the event of a network failure.

Benefit: Unify and Scale Your Global Operations Effortlessly

Whether you manage a single facility or a global network of data centers, our cloud-based access control grows with your operations.

- Effortlessly add new data halls, racks, and remote sites without costly infrastructure changes or downtime.
- Centralized management ensures consistent security policies are enforced across all locations.
- Real-time visibility gives you full control, accessible from anywhere, at any time.

Benefit: Streamline Compliance and Remain Continuously Audit-Ready

Transform audits from a periodic scramble into a simple, on-demand report.

Centralized Logging: Generate comprehensive access reports for any door, user, or timeframe across all sites.

Immutable Records: Ensure data integrity for compliance with ISO 27001, SOC 2, PCI DSS, etc.

Policy Enforcement: Easily demonstrate that access policies (like dual access or time-based permissions) are being consistently enforced.

Benefit: Reduce Operating Costs and Lower Total Cost of Ownership

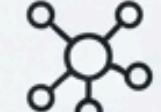

Smarter security, lower overhead. Cut down on expenses without compromising protection.

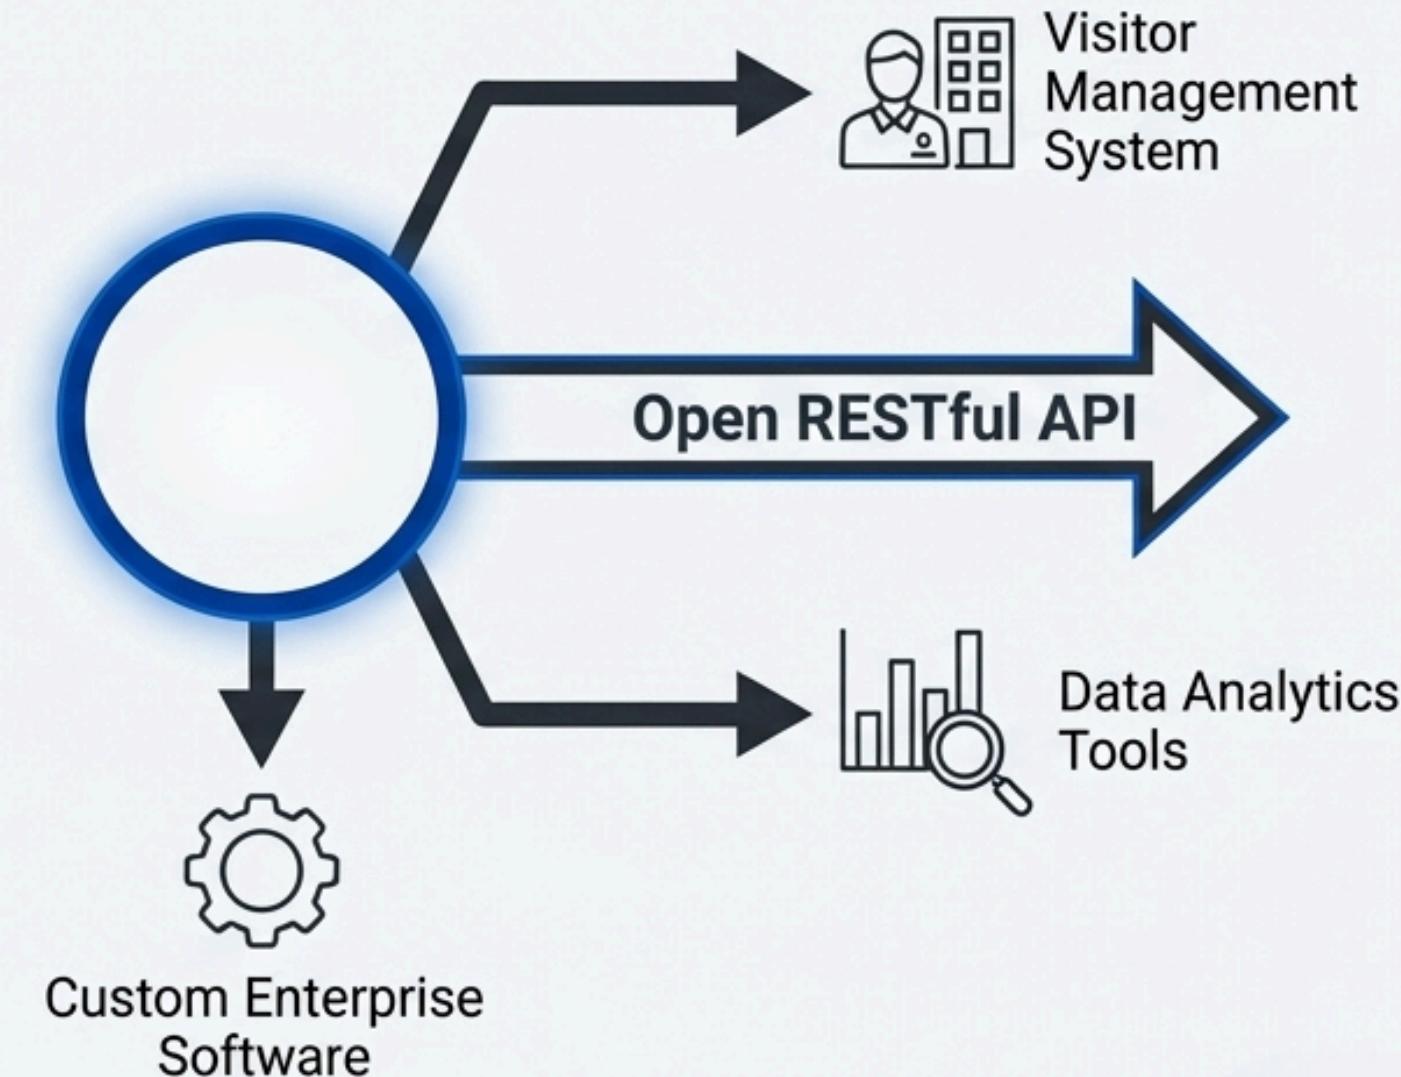

Category	Legacy Systems	NUVEQ
Hardware	On-site servers, dedicated wiring	Minimal hardware, no on-site servers
Installation	Complex, labor-intensive	Quick to Deploy, Easy to Manage
Maintenance	Manual updates, on-site troubleshooting	Automatic over-the-air (OTA) updates, remote diagnostics

Result: Significant savings on labor, infrastructure, and long-term maintenance.

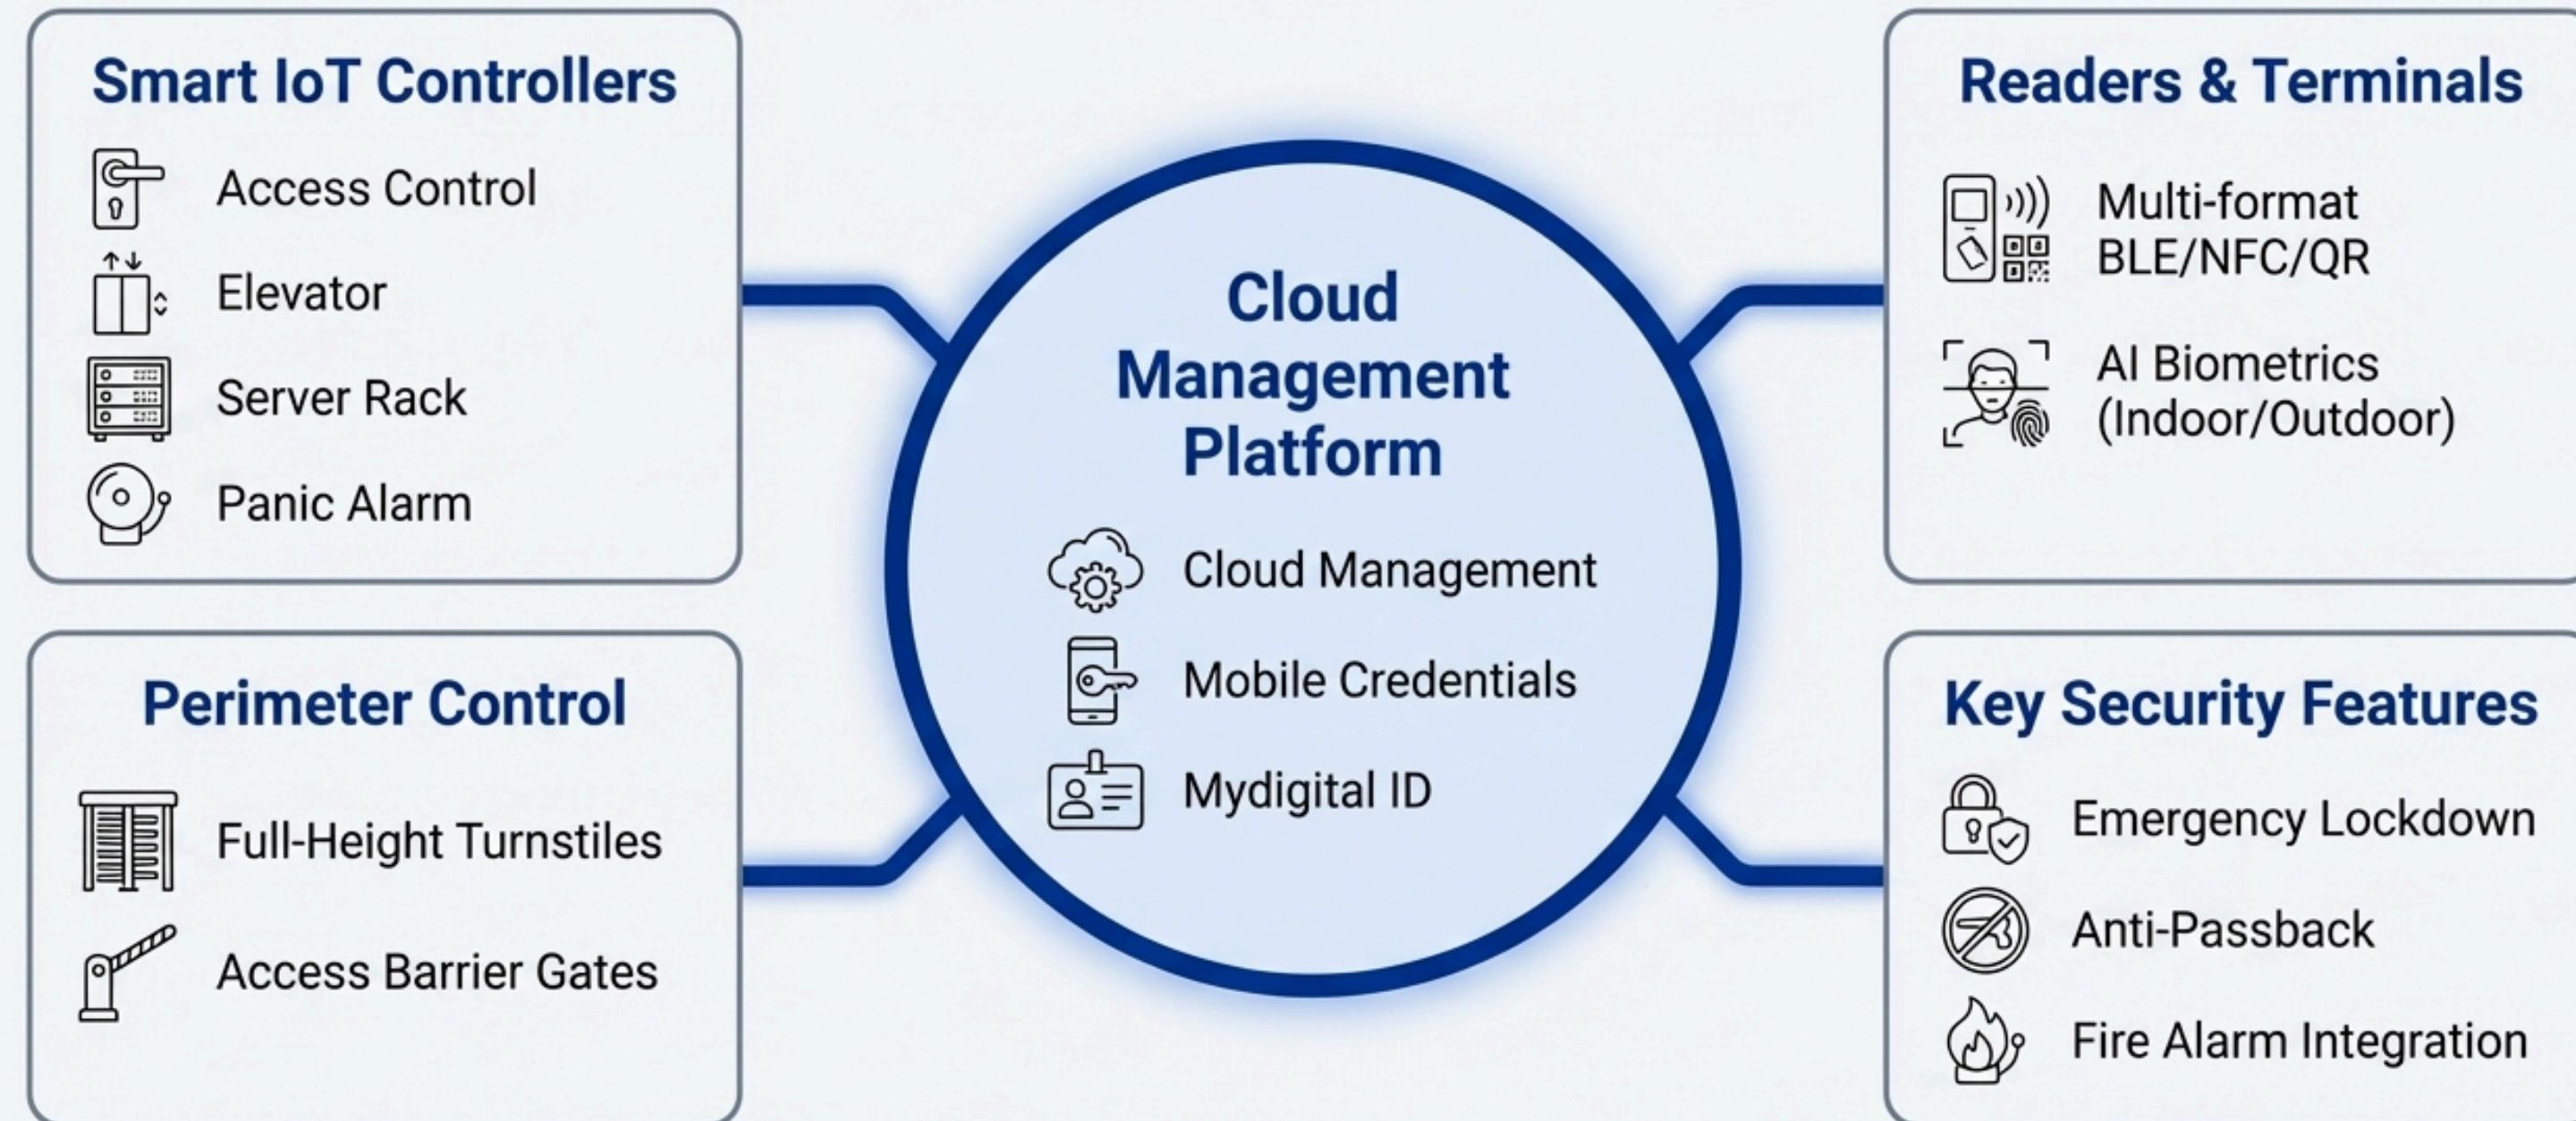

Benefit: Synchronize and Expand with Your Existing Technology Stack

Minimize security threats and enhance efficiency by integrating NUVEQ with your enterprise software solutions.

-  **Open RESTful API:** Develop a customized integration with your preferred software solutions to streamline processes.
-  **Connect Key Systems:** Integrate data analytics tools, visitor management systems, and other Data Center software to gain greater control with reduced manual workload.
-  **Future-Proof:** Our forward-thinking product team consistently introduces new features to ensure the future-proofing of your system.

The Complete NUVEQ Data Center Ecosystem

A single, integrated platform for end-to-end data center security.

Take the First Step Towards a More Secure and Efficient Data Center
