

OPTICAL FLAP BARRIER

EP-FB300Q

The EP-FB300Q Quantum optical flap barrier is a type of access control system used for pedestrian entry and exit in restricted areas. It uses optical sensors to detect movement and control the barrier's movement accordingly, with speeds up to 55 persons per minute. Which can be ideal installed at metro, station, office building and other places where vast visitors passing through.

In terms of appearance, the EP-FB300Q Quantum optical flap barrier has a classic black and white color scheme, giving it an elegant and timeless look that is suitable for high-end applications. The design of the turnstile is intended to blend in seamlessly with the surrounding environment, while still being highly functional and easy to use.

FEATURES

- Two way or one way working.
- Support integrated with any type of access control systems.
- 0.1S fast open speed, 55 person/min high throughput.
- Lower power consumption.
