

Transforming Security from a Cost Center into a Strategic Asset

The Business Case for Migrating to Nuveq's
Cloud-Native Platform

Migrating to Nuveq's Cloud Security Delivers a 12-18 Month Payback Through Significant Cost and Operational Improvements.

The Opportunity

Legacy on-premise security systems are a hidden drain on our P&L, creating unnecessary IT overhead, high installation costs, and significant operational risks.

The Recommendation

We recommend migrating our access control and security to Nuveq's cloud-native platform to reduce total cost of ownership (TCO) and modernize our operational infrastructure.

70%

Reduced IT Overhead
from automated updates and zero server maintenance

3-5%

Annual Payroll Savings
from eliminating "buddy punching" via biometrics

65%

Lower Installation Costs
due to plug-and-play IoT architecture

12-18 Months

Full Payback Period
achieved through direct cost savings and operational efficiencies

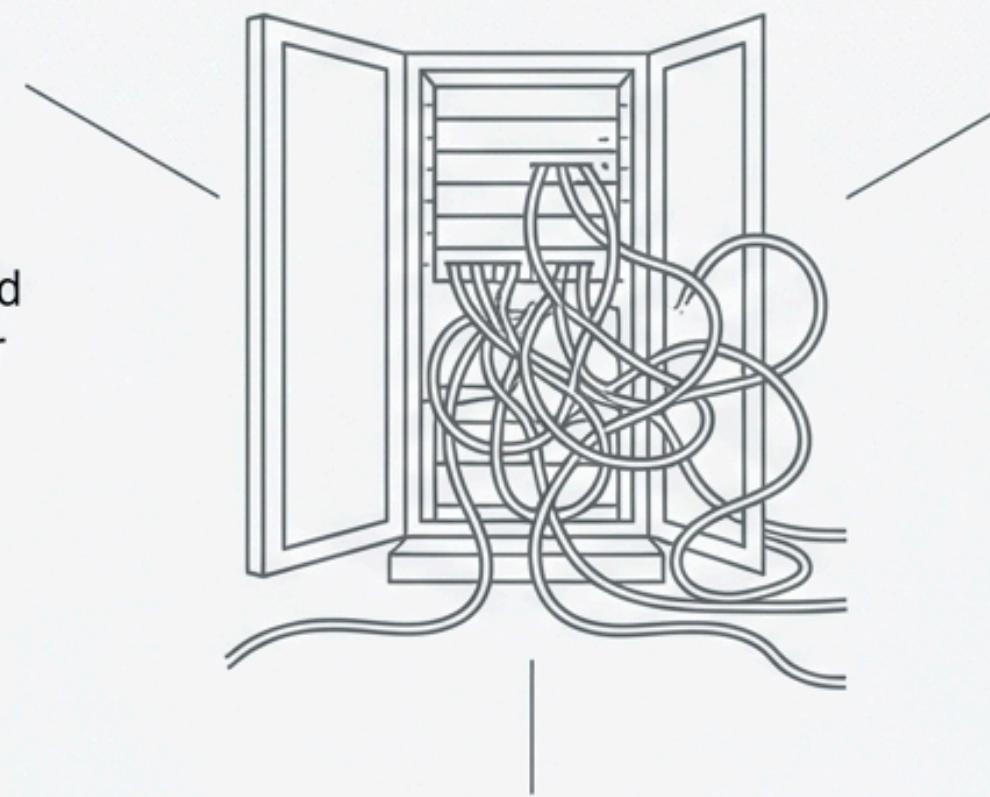

Our Current On-Premise Security is a Cost Center, Not a Strategic Asset.

High & Inflexible Capital Expenditure (CapEx)

Significant upfront investment in servers, racks, and cooling infrastructure that is rigid and difficult to scale. Ongoing manual labor for backups, patches, and maintenance drives up operational costs.

Costly and Disruptive Installation

Complex wiring requirements lead to high infrastructure costs and prolonged installation timelines, disrupting operations. Our current system requires specialized technicians for any changes or expansions.

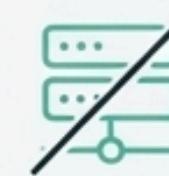

Hidden Operational & Compliance Risks

Prone to downtime, which compromises security. Manual processes for safety and compliance checks (like mustering) are slow, inaccurate, and create liability risks.

Nuveq's Cloud-Native Platform Transforms Security into a Scalable, Data-Driven Utility.

Nuveq moves security from on-site hardware to a 100% cloud-based service. This eliminates the server footprint and converts unpredictable capital costs into a predictable operational expense, while providing real-time data and control across all locations.

Zero Server Footprint

Automated Updates & Health Checks

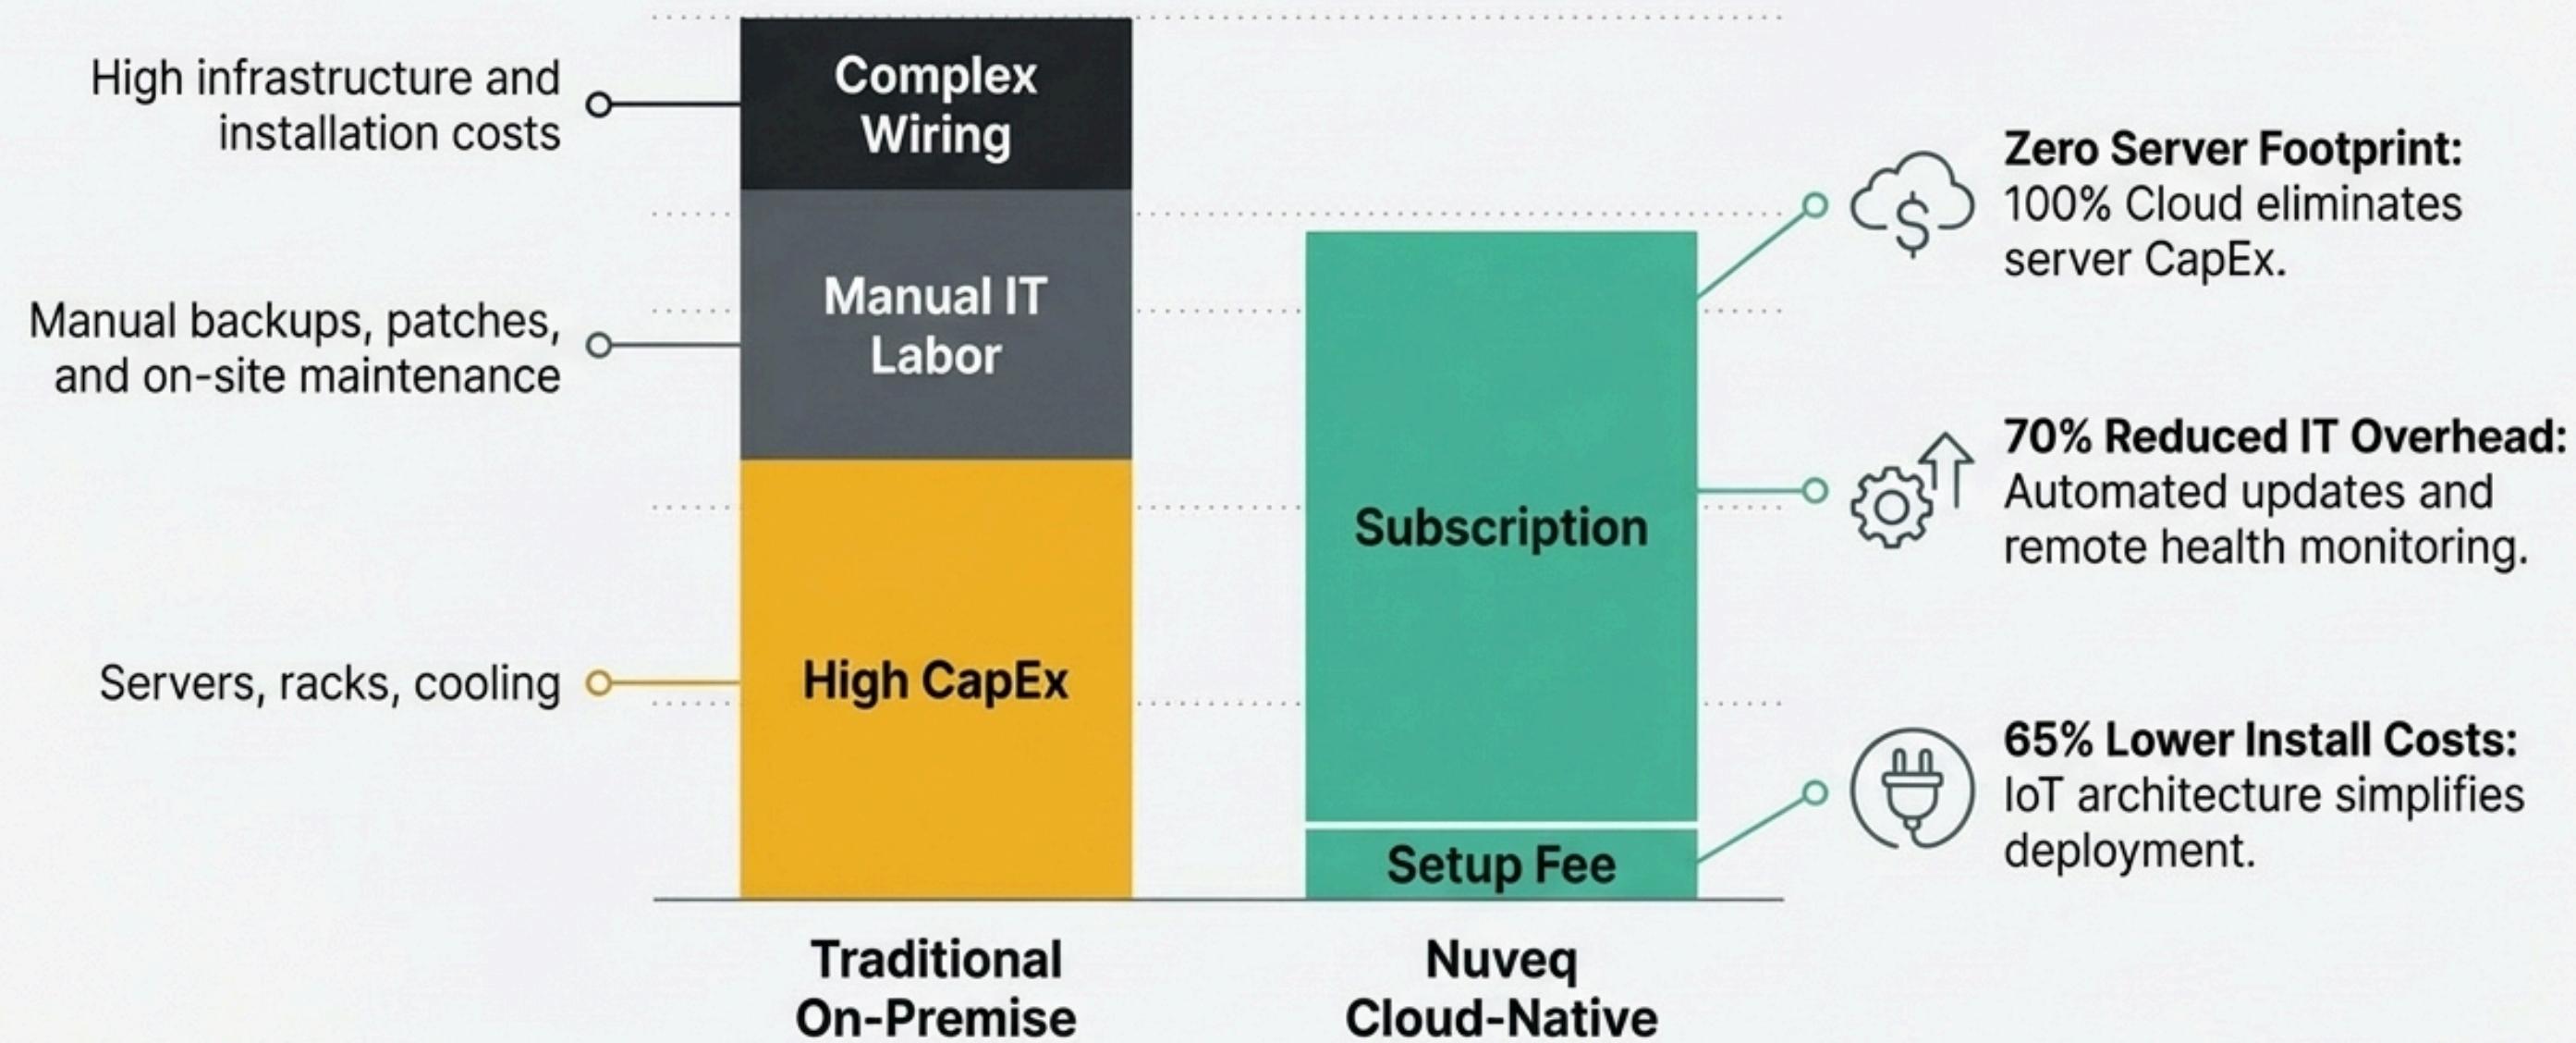

Plug-and-Play IoT Architecture

Open Integration with Business Systems

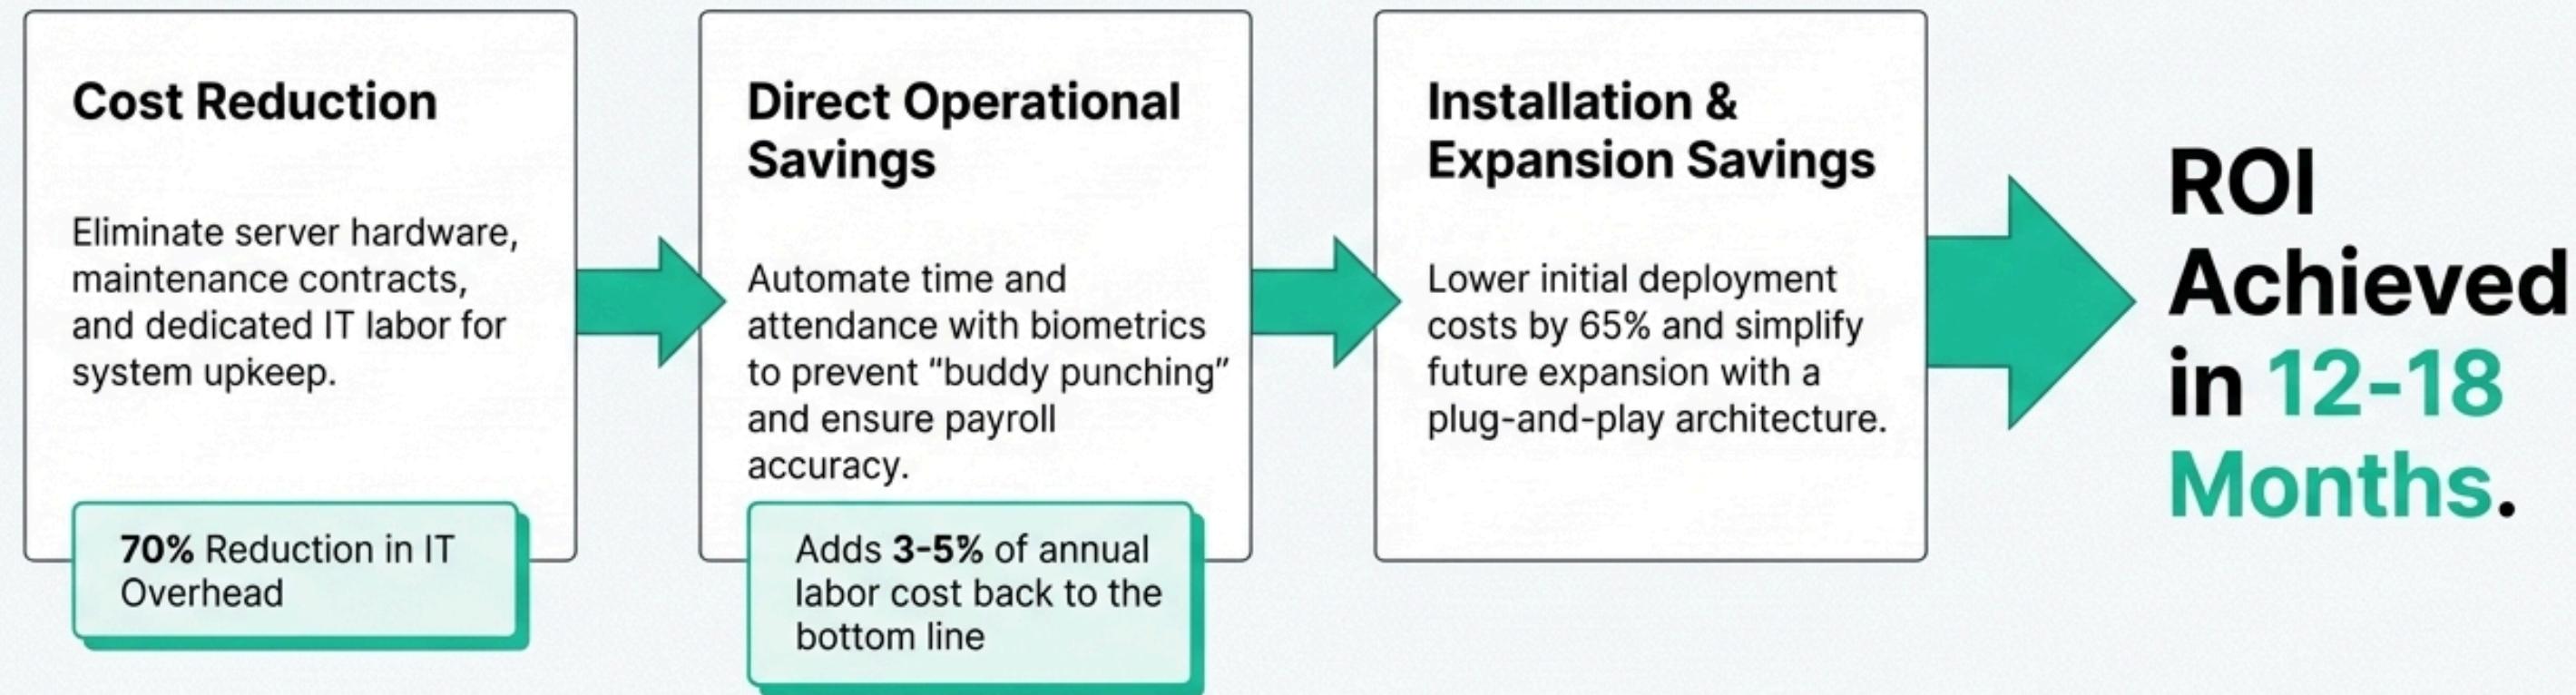

The Financial Case

The TCO Comparison is Clear: Nuveq Reduces Both Upfront and Ongoing Costs.

The Financial Case

Operational Savings and Cost Avoidance Drive a System Payback in 12-18 Months.

The Operational Case

Nuveq Moves Beyond Cost Savings to Drive Operational Excellence and Mitigate Risk.

Workforce Accuracy

Ensure payroll integrity and precise time tracking with biometric verification, eliminating human error and leakage.

Safety & Compliance

Automate critical safety protocols like emergency mustering and zone-based access, providing real-time data to prevent accidents and avoid compliance fines.

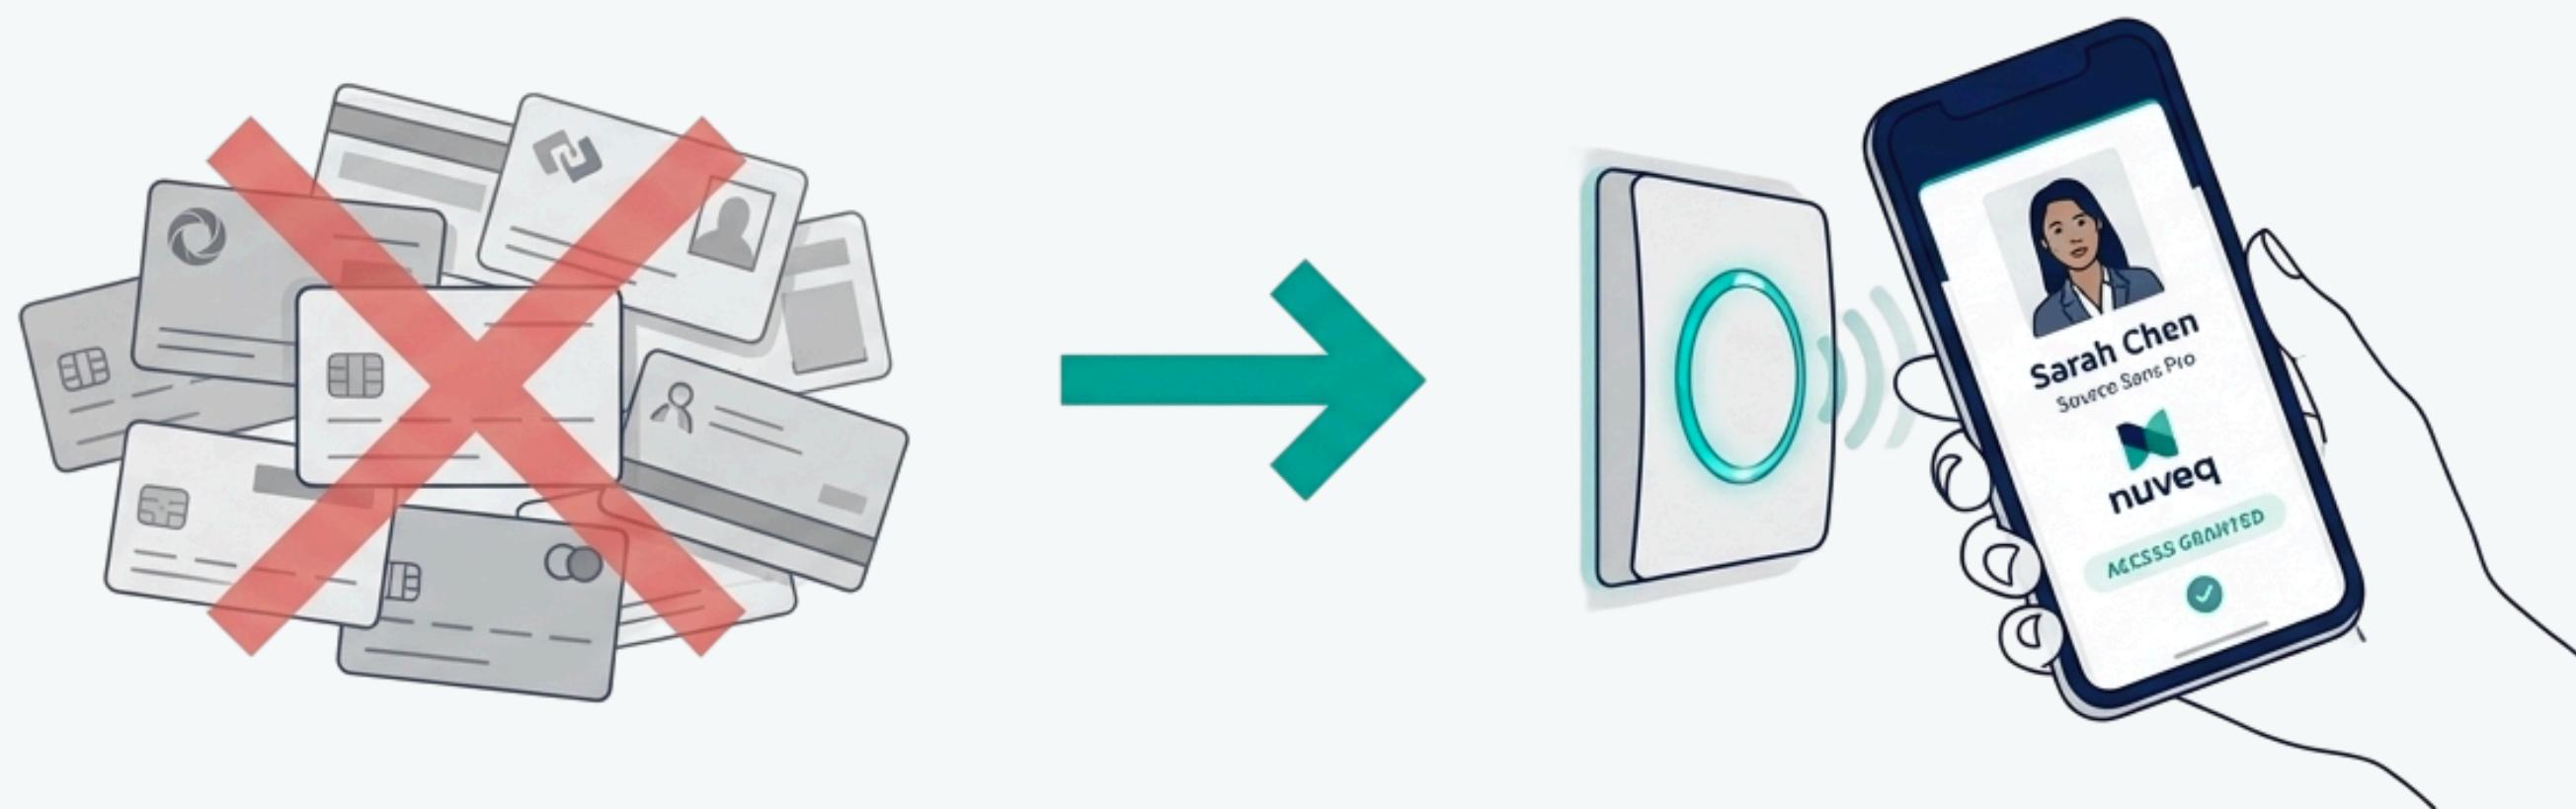

Centralized Control

Gain complete visibility and unified management over all sites from a single interface, streamlining security administration.

The Operational Cases

Modern mobile credentials reduce hardware costs and improve employee convenience.

With Nuveq Mobile Credentials, employees use their smartphones as their key. This **eliminates the cost and administrative hassle of issuing, tracking**, and replacing plastic keycards. It also offers a **more secure, modern experience** for our workforce.

The Operational Case

Automated, Real-Time Data Reduces Workplace Risk and Ensures Compliance.

Automated Emergency Muster

In an emergency, Nuveq provides instant, cloud-synced reports of all personnel, accounted for by their last scan. This replaces slow, inaccurate manual clipboards and provides first responders with critical, real-time data, helping to avoid potential OSHA fines.

Enforced Zone-Based Compliance

Automatically restrict access to hazardous machine areas to only certified staff. This enforces safety protocols, lowers the risk of workplace accidents, and can directly contribute to lower insurance premiums by demonstrating proactive risk management.

The Strategic Case

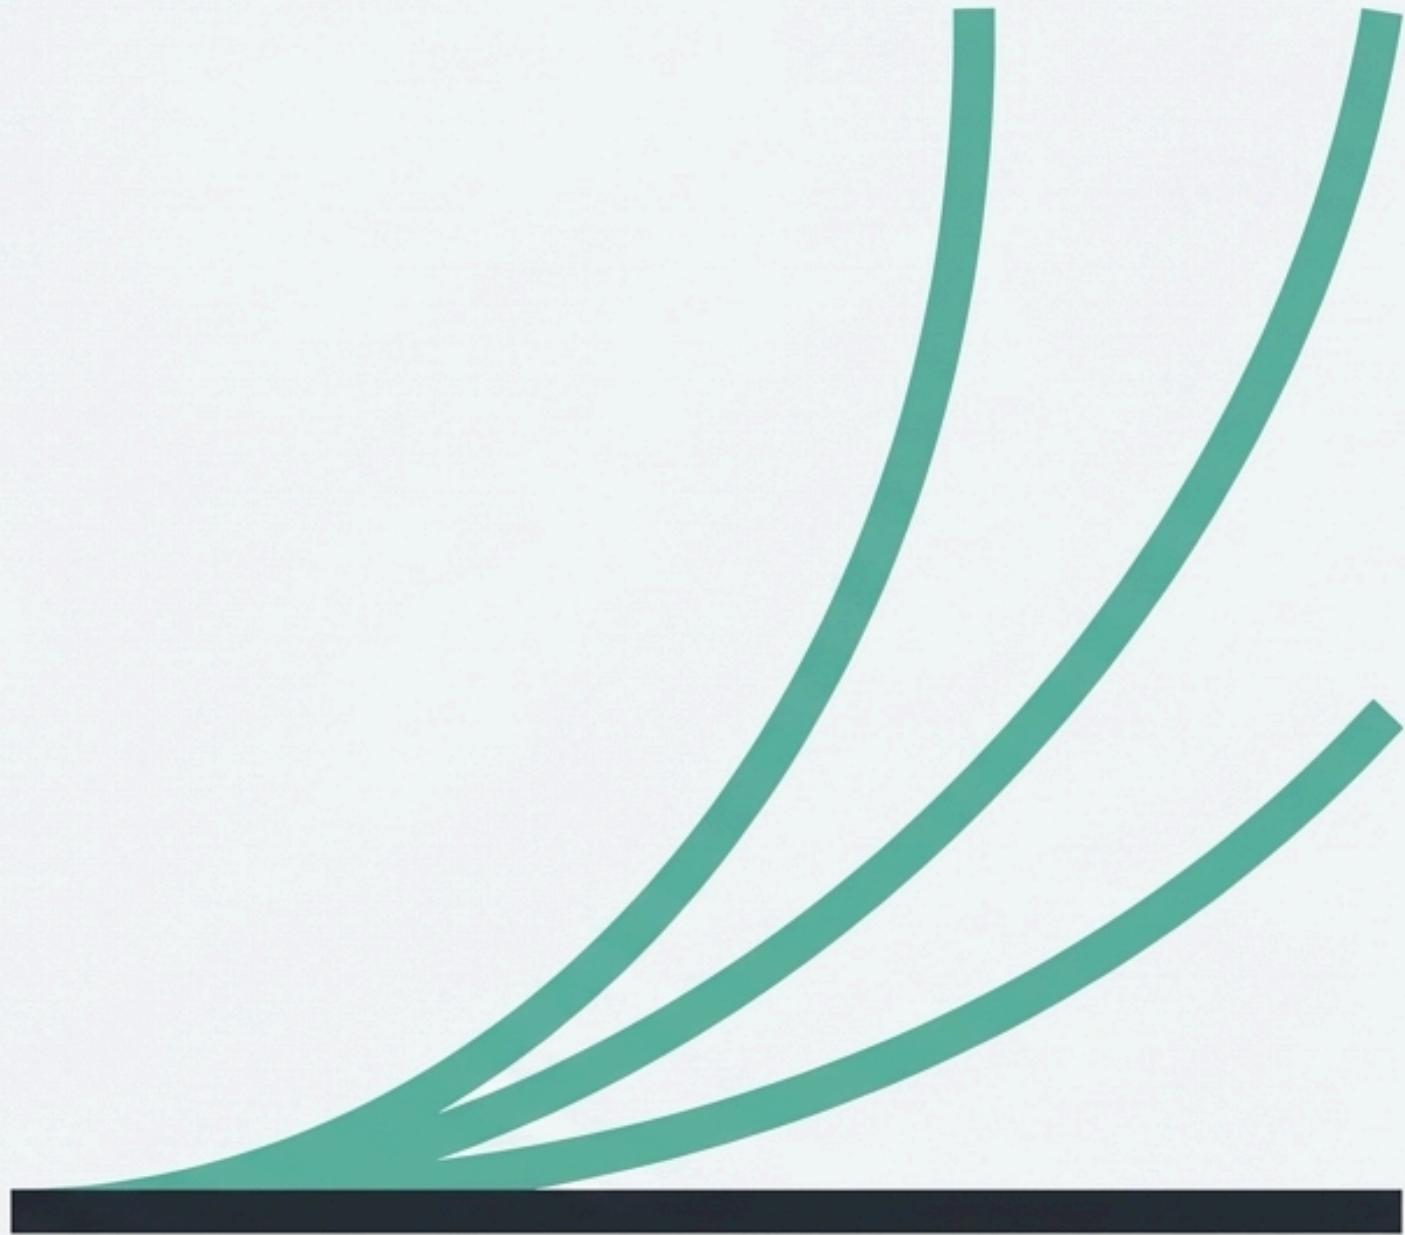

Nuveq is a Future-Proof Platform Designed for Scalability and Integration

Investing in Nuveq is not just a one-time fix; it's an investment in a modern, flexible infrastructure that adapts to our business needs. The platform is built to grow with us, integrate seamlessly, and align with our corporate goals.

Scalability: Effortlessly manage one site or one hundred.

Integration: Connect security data with core business systems (ERP, HR).

Sustainability: Reduce hardware footprint and energy consumption.

The Strategic Case

Manage the Entire Organization—from Plant to Warehouse to HQ—from One Login.

Nuveq's cloud architecture eliminates the complexity of managing disparate, on-premise systems at each location. Administrators can grant or revoke access, monitor activity, and pull reports for any site, anywhere, from a single, intuitive web-based interface. This drastically reduces administrative overhead and ensures consistent security policies across the entire enterprise.

The Strategic Case

An Open API Ensures Seamless Integration with Our Existing ERP, HR, and Payroll Systems.

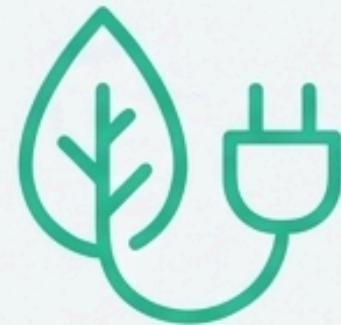

The Value of Integration

Nuveq is not a data silo. Its open API allows it to seamlessly connect with our core business systems. This enables powerful workflows, such as automatically de-provisioning access when an employee is terminated in the HR system or syncing time data directly to payroll, reducing manual data entry and errors.

The Strategic Case

Modernizing Our Physical Security Directly Supports Our Corporate ESG Goals.

Environmental Benefit

By eliminating the need for on-premise servers, racks, and dedicated cooling systems at each facility, the Nuveq platform significantly reduces our hardware footprint and overall energy consumption. This is a measurable contribution to our sustainability targets.

Social & Governance Benefit

The enhanced safety and compliance features, such as automated mustering and zone-based access, demonstrate a commitment to workforce well-being and strong corporate governance, which is increasingly important to investors and stakeholders.

The Recommendation: A Clear Business Case for Migration.

“

By migrating to Nuveq's cloud-based architecture, we **eliminate server maintenance costs, reduce installation time by over 50%**, and gain real-time visibility into workforce safety—**paying for the system upgrade within the first 12–18 months** through operational savings.

This decision represents a strategic shift from a reactive cost center to a proactive, data-driven operational asset.
