For Financial Institutions, the Security Stakes are Uniquely High.

Complex Regulatory Demands

Your operations are governed by strict industry regulations like PCI DSS. Compliance isn't optional-it's foundational to your license to operate. Built-in audit trails and detailed access logs are critical for reporting.

Distributed Physical Footprint

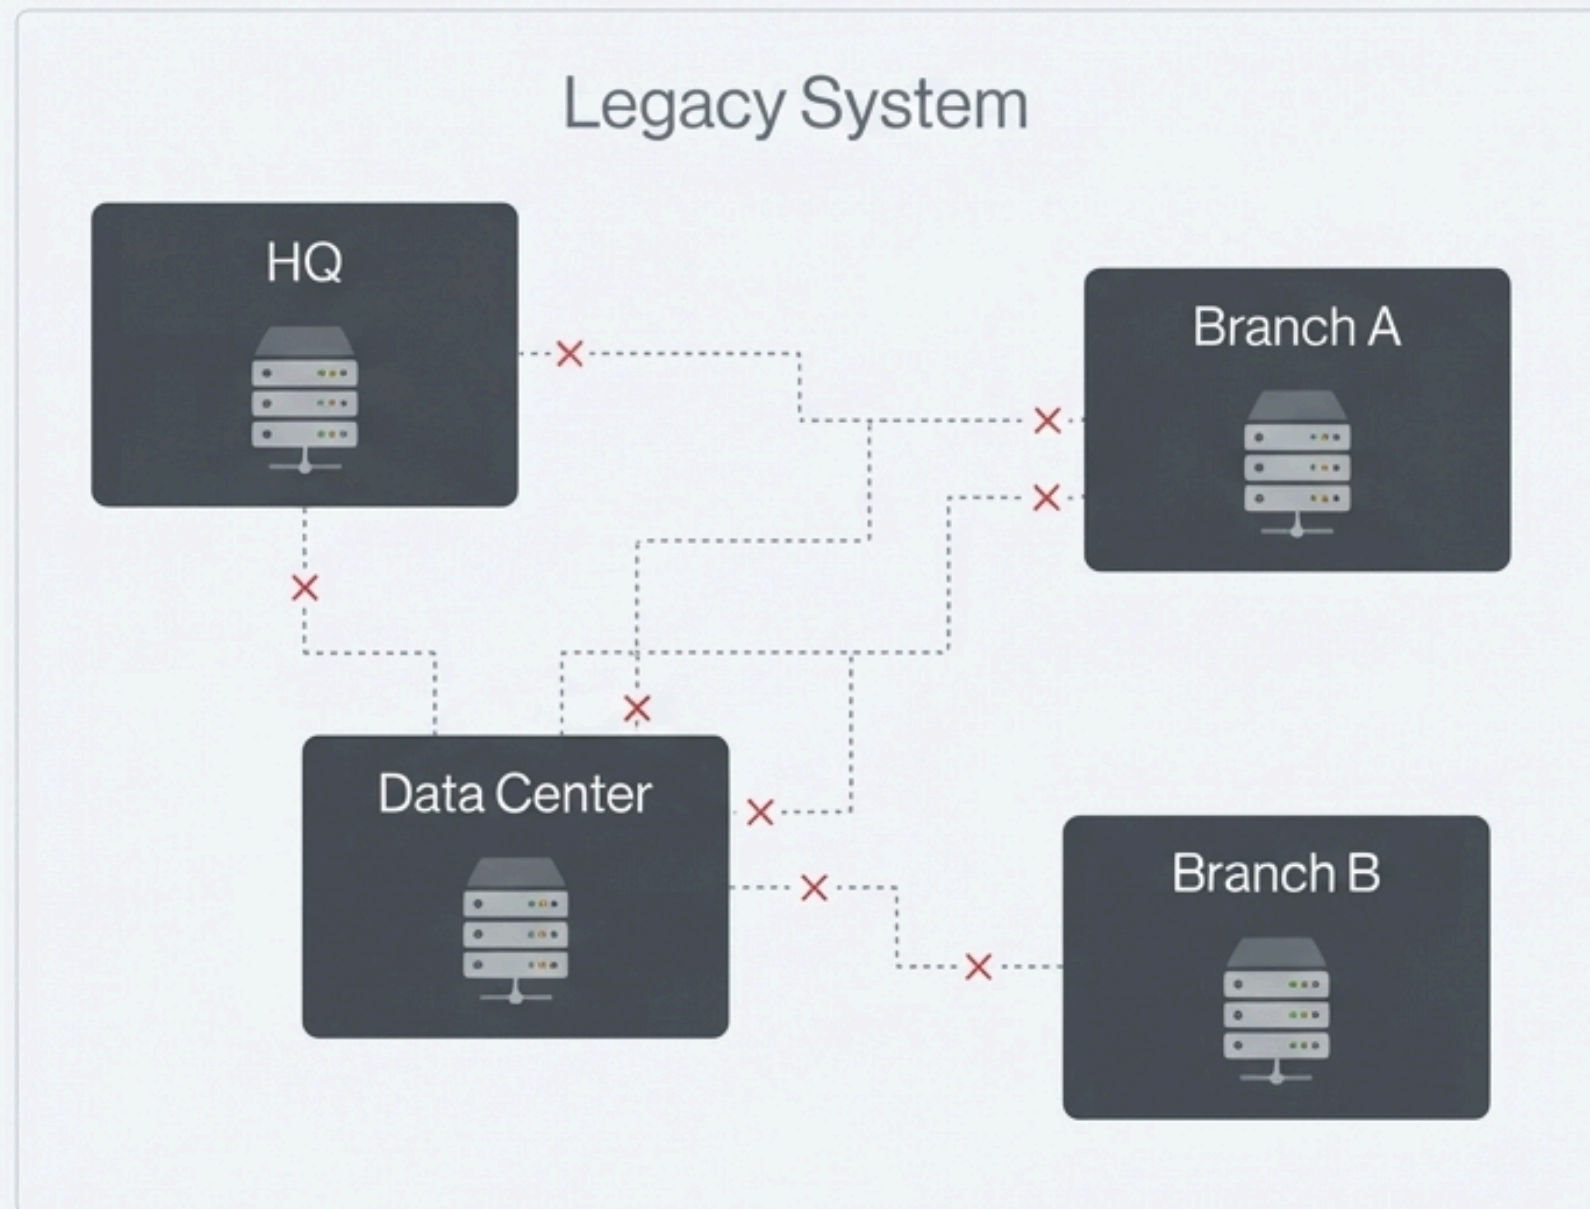

Your network spans from corporate headquarters and data centers to hundreds of regional branches and ATM locations. Each point is a potential vulnerability that requires consistent, centralized policy enforcement.

The Currency of Trust

Your reputation is your most critical asset. A security breach erodes the confidence of clients, partners, and regulators. Robust security is a non-negotiable component of building and maintaining trust.

Legacy Access Control Systems Create Dangerous Security Silos.

- **Fragmented Oversight:** Each location operates as an island, making it impossible to enforce consistent security policies across the organization.
- **Manual & Inefficient:** Updating permissions, pulling audit logs, or responding to an incident requires on-site intervention, wasting time and resources.
- **Inflexible & Hard to Scale:** Adding a new branch or upgrading security protocols is a costly, complex hardware project, not a simple software update.
- **Vulnerable to Failure:** On-site servers represent a single point of failure, susceptible to physical tampering or local network outages.

A Disconnected System Exposes Your Institution to Cascading Risks

Compliance Failures

Without a unified, real-time view of access events, generating accurate audit trails becomes a manual, error-prone nightmare, putting the institution at risk of fines and sanctions.

Operational Drag

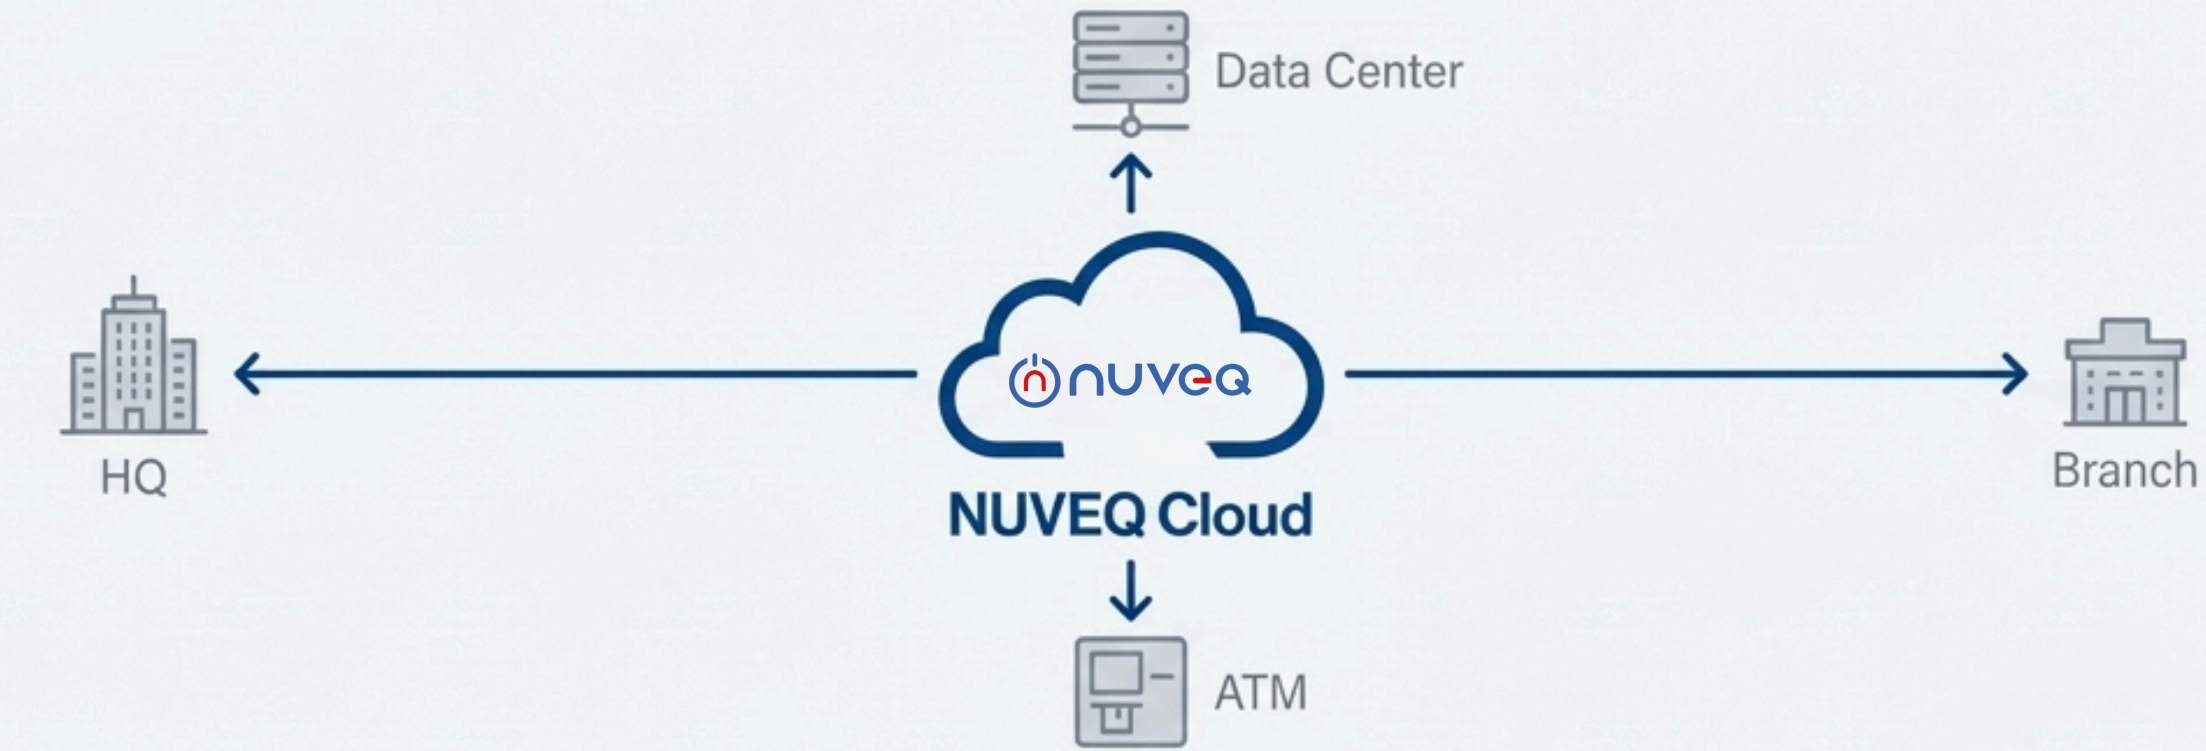

Inefficient, manual processes for managing access for employees, vendors, and visitors slow down operations and divert valuable IT and security personnel from strategic initiatives.

Reputational Damage

A single security lapse at one branch can become a headline, eroding the client and investor confidence that is the bedrock of your institution's value.

NUVEQ Delivers Unified Security for the Modern Financial Fortress

Our cloud-based platform is designed to provide absolute Control, simplify Compliance, and build stakeholder Confidence.

Control

Centralized, real-time oversight of every access point across your entire organization from a single dashboard.

Compliance

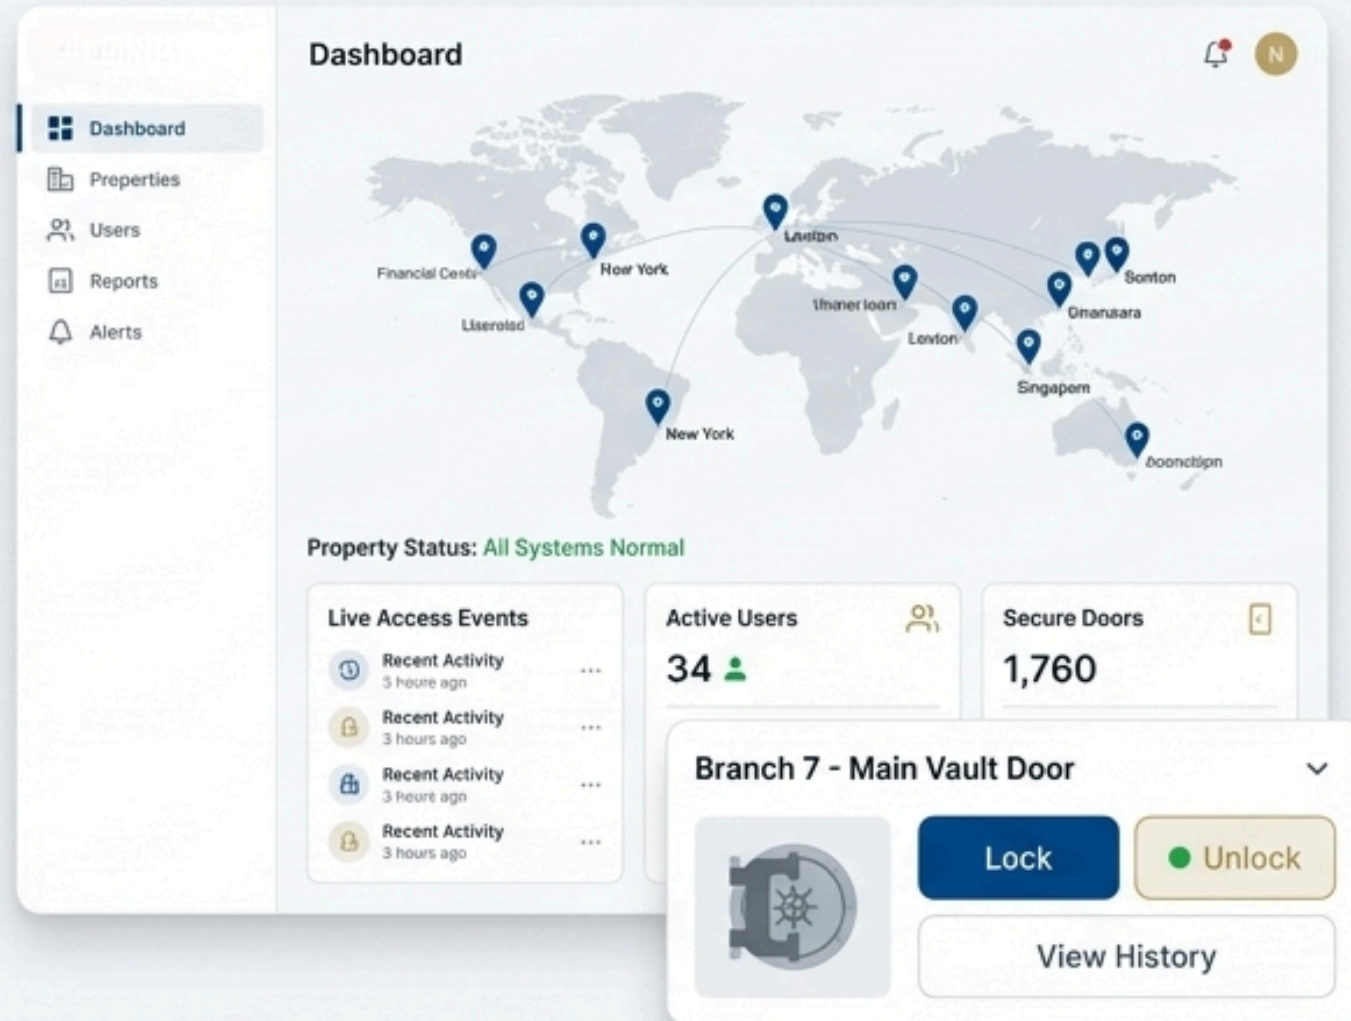

Automated, detailed access logs and built-in audit trails to satisfy regulators and simplify reporting.

Confidence

A secure environment that protects critical assets and strengthens trust with clients, employees, and partners.

Gain Centralized Control and Full Visibility Across Your Entire Network.

Manage Multiple Properties from One Dashboard

Secure and streamline access across all branches, offices, ATMs, and data centers. Instantly update permissions, monitor activity in real-time, and enforce consistent security policies across all properties.

Remote Management & Response

Control access to individual doors or entire premises remotely. Lock down facilities in an emergency, grant temporary access to vendors, or adjust schedules without ever needing to be on-site.

Granular Access Roles

Implement true 'least privilege' access. Manage access levels according to the security requirements of different areas—from the trading floor to the server rack—ensuring personnel only access authorized zones.

Streamline Compliance and Simplify Auditing.

Immutable Audit Trails

Every access event—successful or denied—is automatically logged with user, location, and timestamp data. This creates a detailed, searchable record for any investigation or audit.

Effortless Reporting

Generate comprehensive access reports in minutes, not days. Provide regulators, auditors, and stakeholders with complete confidence in your security posture and adherence to standards.

Policy Enforcement

Systematically enforce security policies like dual access modes and anti-passback to meet specific compliance mandates for high-security areas like data centers and cash-handling rooms.

Control physical access to cardholder data

Data Center Access Audits

Branch-Level Event Logging

Build Enduring Trust with Uncompromising Security Measures.

- **For Your Clients**

Create a secure banking environment where clients feel their assets and data are protected, fostering long-term loyalty.

- **For Your Employees**

Ensure a safe workplace with clear security protocols, emergency features like lockdown and mustering, and protection against insider threats.

- **For Your Partners & Regulators**

Demonstrate a proactive and robust security posture that proves your commitment to protecting critical infrastructure and sensitive financial data.

The NUVEQ Ecosystem: A Complete, All-in-One Security Solution.

Platform & Intelligence

(The Brains)

- Cloud-based Management Platform
- Cloud-based Property Management System
- Mobile Credentials & Mydigital ID
- Visitor Management System

Controllers & Infrastructure

(The Nervous System)

- IoT Access Control System
- IoT Elevator, I/O, Door & Panic Modules
- IoT Server Rack Lock

Access Points & Readers

(The Gateways)

- Multi-format BLE/NFC/QR Smart Reader
- AI Biometrics Recognition Terminals (Indoor/Outdoor)
- Encrypted NFC Cards

Physical Barriers

(The Front Line)

- Access Barrier Gates (Folding, Fence Arm)
- Turnstiles (Swing, Tripod, Full Height)

Intelligent Features That Actively Mitigate Financial Sector Risks

Anti-Passback & Door Interlocking

Prevents credential sharing and tailgating in high-security zones like vaults and data centers.

Emergency Lockdown & Mustering

Instantly secures all facilities during a threat and provides real-time reports on personnel safety, crucial for crisis management.

Dual Access Modes

Enforces two-person integrity for accessing the most sensitive areas, meeting stringent compliance requirements.

Global Management & Intrusion Alerts

Provides a 24/7 real-time view of all locations with instant notifications of unauthorized access attempts, allowing for immediate response.

A Future-Proof Platform Designed for Scalability and Resilience

Scales With Your Organization

Easily add new users, doors, or entire branches in minutes without costly infrastructure upgrades. Our system grows from a single office to a global network.

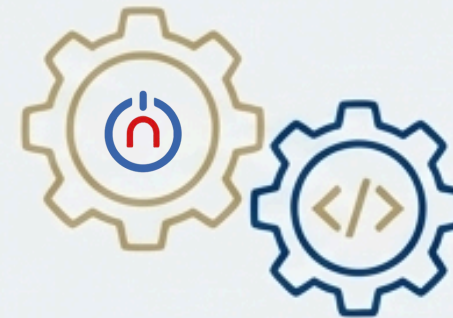

Continuous Improvement via OTA Updates

Benefit from limitless updates delivered over-the-air (OTA), ensuring your system is always equipped with the latest features and security patches without manual intervention.

Guaranteed Uptime with Offline Capability

NUVEQ's system continues to function and secure your premises even during a network failure, ensuring access is never compromised.

Seamless API Integration

Connect NUVEQ with your enterprise software, HRMS, and data analytics tools to synchronize user data, enhance efficiency, and gain deeper security insights.

Reduce Operating Costs and Achieve Faster ROI

Eliminate On-Site Servers

Our cloud-based architecture removes the need for expensive on-premise servers, reducing hardware costs, maintenance, and energy consumption.

Quick to Deploy, Easy to Manage

Fast, hassle-free installation with minimal hardware requirements saves on labor and infrastructure costs from day one.

Streamline Operations

Centralized management and remote troubleshooting capabilities free up valuable IT and security resources, lowering overhead.

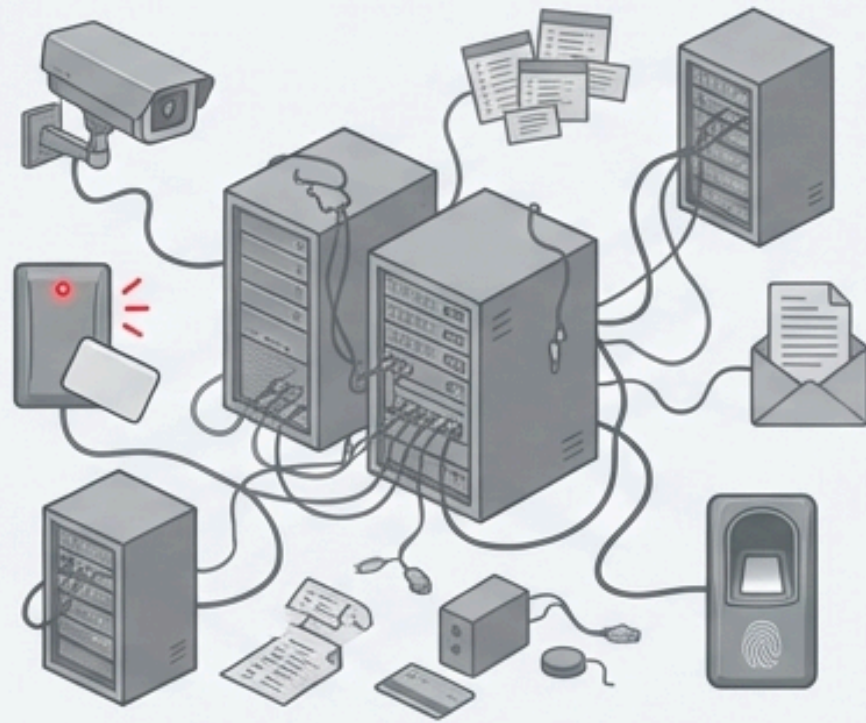

Eco-Friendly Security

A smaller hardware footprint and reduced energy usage contribute to your institution's sustainability goals.

From Fragmented Control to a Unified Security Posture.

Legacy Systems

- Siloed Operations
- High Maintenance
- Manual Audits
- Reactive Security

The NUVEQ Transformation

The NUVEQ Platform

- Centralized Control
- Lower TCO
- Automated Compliance
- Proactive Mitigation

Take the First Step Towards Building Your Modern Fortress.

Secure your institution, streamline your operations, and build enduring trust with NUVeq's cloud-based access control.
